三、克漏字測驗【請依照段落上下文意，選出最適當的答案】

Few things in life are more common than wind. And 26, humans still cannot predict how it will behave. That is a problem not only for scientists 27 for the global economy. Better weather forecasting could help optimize many things from planting crops 28 booking flights. It could also add as 29 as \$30 billion to the economy each year (according to the World Bank) and save some \$2 billion in damages from storms. True, humans have long been able to 30 some benefits from wind, using it to power ancient sailboats, preindustrial windmills, and now electricity-generating turbines. But we still have a long way to go if we want to truly harness the untamed force.

- 【2】26. ① thus ② yet ③ then ④ hence

【3】28. ① when ② until ③ to ④ including
【4】29. ① more ② many ③ numerous ④ much
【1】30. ① reap ② seal ③ misplace ④ donate

四、閱讀測驗【請在下列各題中選出最適當的答案】

At the outskirts of Berlin, Michael Barillere-Scholz is testing a driverless vehicle that is neither stylish nor futuristic. The vehicle is boxy and painted white. Its top speed barely reaches 20 miles per hour.

The self-driving vehicle is a shuttle with room for 12 passengers. Barillere-Scholz, who leads the driverless research team at Deutsche Bahn, Germany's largest train and bus operator, has been testing the vehicle around a local office park. Later, the partly state-owned public transit company will begin separate trials of a similar autonomous bus on public roads in southern Germany, connecting a local train station with stops along a predetermined route.

"We want to show that autonomous cars don't have to be limited to luxury consumer vehicles, they also have a role in public transport," Barillere-Scholz said. "The market in Germany for this type of vehicle is huge."

The coming age of driverless cars has typically centered on Silicon Valley highfliers like Tesla, Uber and Google, which have showcased their autonomous driving technology in luxury sedans and SUVs costing \$100,000 or more. But across Europe, driverless projects like those by Deutsche Bahn are instead focused on practical self-driving vehicles for mass transit.

Going without the latest automotive trends of aerodynamics and style, European transportation companies and city planners are aiming to connect these unglamorous driverless vehicles to existing public transportation networks of subways and buses. The goal is to eventually offer on-demand driverless services to those who cannot afford the latest expensive offerings from Tesla and others.

While cities in the United States — including Ann Arbor, Michigan, and Las Vegas — have tested some of these mass transit driverless vehicles, Europe is a particular hotbed of this activity. That is because of the region's densely packed urban areas and decades-old and widely used public transit systems, which often include subways, trains and buses.

In total, more than 20 pilot or existing public transport programs have taken place in Europe involving autonomous vehicles, according to a review by *The New York Times*. Most of these projects have received government funding.

【2】31. Which of the following would be a proper title for this passage?

- ① History of the Development of Autonomous Vehicles
② Future of European Mass Transit: Driverless and Practical
③ Autonomous Driving in Silicon Valley
④ Germany's Largest Transit Operator

【4】32. Where is Barillere-Scholz currently testing the driverless bus?

- ① on a freeway
② around a train station
③ on a public road
④ around an office park

【3】33. Roughly how fast (miles per hour) can the bus being tested by Barillere-Scholz go?

- ① 60 ② 40 ③ 20 ④ 10

【1】34. Which of the following can be inferred from the passage?

- ① Governments in Europe are involved in developing driverless transit.
② Las Vegas offers the best public transit in the USA.
③ Self-driving vehicles will not be used in newer public transit systems.
④ All driverless vehicles are plain-looking and slow.

【1】35. According to the passage, which of the following statements is true?

- ① The bus tested by Barillere-Scholz is designed to be useful rather than stylish.
② Self-driving vehicles are purely for rich people.
③ Deutsche Bahn is a company completely owned by government.
④ The U.S.A has given up testing mass transit driverless vehicles.

貳、非選擇題【二大題，每題 15 分，占 30 分】

第一題：翻譯題（中翻英）

商標法給予註冊之商標專屬的權利保護，除了由其所有者使用，亦可以有償之方式授權給他方使用。要確保可以使用該商標的權利，必須採取措施來充分保護它，並且確保不受到侵權傷害。在產品旁邊出現的“TM”及在圓圈中“R”標誌是不同的。為了保護商標權利及使用，了解這兩個標誌的差異有絕對必要。以美國為例，透過向美國專利商標局（USPTO）提出商標申請，通過後就可以將有圓圈“R”的標誌放在商標旁邊。一旦完成註冊，等於告知他人不得侵權使用該商標，同時侵權者常宣稱不知道該商標已受保護的藉口也不成立。因此，在訴訟的情況下，商標註冊提供了法律保障，強化商標權利人的立場。

第二題：翻譯題（英翻中）

Launched in 2013 as “one belt, one road”, this initiative involves China underwriting billions of dollars of infrastructure investment in countries along the old Silk Road linking it with Europe. The ambition is immense. China is spending roughly \$150bn a year in the 68 countries that have signed up to the scheme. The summit meeting (called a forum) has attracted the largest number of foreign dignitaries to Beijing since the Olympic Games in 2008. Yet few European leaders are showing up. For the most part they have ignored the implications of China's initiative. What are those implications and is the West right to be sanguine? The suspicion that the project will fail could be misguided, considering an unquenchable thirst for infrastructure in many developing Asian nations in particular.
