一、請將下列韓文翻譯成中文：（25 分）

한국과 대만은 1992 년 한중수교로 단교했다. 하지만 그 이듬해 서울과 타이베이에 각각 대표부를 설치하고 실질적인 교류협력을 지속하고 있다. 인천은 중화권 교류 다각화 측면에서 대만이 중요한 교류 대상지이지만, 양안관계 등 정치적 마찰 우려 등으로 인해 양 도시의 교류는 제한적으로 진행되고 있다. 이 같은 상황에서 인천연구원에서는 “인천-대만 도시 교류협력 기본 방향과 과제” 연구보고서를 통해, 인천이 대만과 도시 교류협력을 진행하는 데 고려해야 할 대내외적 조건을 분석하고 교류 방향과 과제를 제시하였다. 보고서에서는 인천-대만 도시 교류협력 기본방향으로 ①실리적 도시외교 추진, ②중점도시와 분야 교류 협력, ③다층적 네트워크 조성, ④내부역량 강화와 토대 마련을 제시하고 있다.

二、請將下列中文翻譯成韓文：（25 分）

「地鐵宅配」的工作受到韓國高齡者歡迎。由持有「敬老通行證」的年長者搭乘地鐵宅配行李。主要的行李像是購物商場或百貨公司的服飾、公司的文件等等。在韓國只要搭地鐵，常常可以看見年長者雙肩雙手背好提滿數十個大型購物袋。他們每個月能夠收取 50 多萬韓元的宅配費用，加上付給仲介業者介紹費，大概剩下 30~40 萬韓元（約 7,000~9,000 多新臺幣）。但是要能夠完成地鐵宅配的工作，必須要具備足夠的體力，能夠整天在地鐵裡轉來轉去。還必須要具備能速讀購物商場或百貨賣場英文品牌名稱的靈敏度。對體力沒有自信，或是沒辦法看懂英文字母的年長者，是沒辦法做這份工作的。

請依下文回答第 16 題至第 20 題

Space colonization, once a topic confined to science fiction, has now become a plausible idea. With rapid advancements in technology and growing interest from both public and private entities, the possibilities of humans establishing permanent settlements in space are gaining momentum.

Space colonization is driven by the vision of expanding human presence beyond Earth and ensuring the long-term survival of our species. Scientists believe that establishing self-sustaining colonies on celestial bodies such as the Moon, Mars, or even asteroids could provide a solution to future challenges on Earth, including overpopulation and resource depletion. One of the main hurdles in space colonization is the development of reliable transportation systems. Achieving routine and affordable access to space is critical for large-scale migration. The emergence of reusable rocket technology has significantly lowered the cost of reaching orbit. Moreover, ongoing research on advanced propulsion systems, such as ion engines and nuclear propulsion, could further enhance our ability to travel longer distances within the solar system. Creating habitable environments in space is another essential aspect of colonization. This involves designing closed-loop life support systems that can sustain human life for extended periods. NASA's International Space Station (ISS) serves as a crucial testing ground for developing and refining these technologies. Advances in areas like hydroponics, 3D printing, and energy generation have the potential to enable self-sufficient habitats in space.

While the challenges are immense, space colonization offers several benefits. One significant advantage is the potential to exploit extraterrestrial resources. Asteroids, for instance, contain valuable metals like platinum and gold, as well as water ice, which can be utilized for life support and fuel production. By harnessing these resources, space settlers could establish sustainable economies and reduce dependence on Earth's limited reserves. The prospect of space migration also opens up new frontiers for scientific discovery. Studying celestial bodies firsthand can deepen our understanding of the universe and shed light on fundamental questions about the origin and nature of life. Furthermore, the development of technologies and methodologies required for space colonization could have far-reaching applications on Earth, benefiting industries such as medicine, energy, and materials science.

In conclusion, space colonization has transitioned from science fiction to an attainable goal, opening up new possibilities for humanity. Unlocking the potential of space migration could mark a significant chapter in our history, allowing us to explore, flourish, and secure the long-term survival of our species beyond the limits of Earth.
